# RSA5000 Series
Real-time Spectrum Analyzer

- Ultra-Real technology
- Frequency: up to 6.5 GHz
- Displayed average noise level (DANL): <-165 dBm (typical)
- Phase noise: <-108 dBc/Hz (typical)
- Level measurement uncertainty: <0.8 dB
- 6.5 GHz tracking generator
- Min. RBW 1 Hz
- Up to 40 MHz real-time analysis bandwidth
- Multiple measurement modes
- Various advanced measurement functions
- Vector signal analysis measurement application (option)
- EMI measurement application (option)
- Multiple trigger modes and trigger masks
- Density, spectrogram, and other display modes
- PC software options
- 10.1" capacitive multi-touch screen, supporting touch gestures
- USB, LAN, HDMI and other communication and display interfaces

RSA5000 Series Real-time Spectrum Analyzer

Built-in Linux operating system reliable and stable interface

Built-in quad-core processor high processing speed

10.1-inch capacitive multi-touch screen supporting touch gestures

Support keyboard and mouse operation

TG : 100kHz to 3.2/6.5GHz -40 to 0dBm

RF: 9kHz to 3.2/6.5GHz

Product Dimensions: Width × Height × Depth = 410 mm × 224 mm × 135 mm

Based on the Ultra-Real technology, the high-speed real-time measurement mode allows you to acquire the signals in the analysis bandwidth seamlessly and make data analysis. It also provides various display modes, such as Spectrogram, Density, and PVT. Besides, FMT function is also available.

The Ultra-Real technology has the following features:

- **Seamless analysis**
  ◎ Seamless I/Q data acquisition in the analysis bandwidth
  ◎ Seamless spectrum analysis

- **FMT**
  ◎ Frequency mask trigger (FMT) to trigger the measurement by sporadic or transient events in the spectrum

- **Composite displays**
  ◎ Spectrogram for gap-free display of the spectrum
  ◎ Density for you to visualize how frequently signals occur

▶ Specifications

Specifications are valid under the following conditions: the instrument is within the calibration period, is stored for at least two hours at 0℃ to 50℃ temperature, and is warmed up for 40 minutes. Unless otherwise noted, the specifications in this manual include the measurement uncertainty.

Typical: characteristic performance, which 80 percent of the measurement results will meet at room temperature (approximately 25℃). This data is not warranted and does not include the measurement uncertainty.

Nominal: the expected mean or average performance or a designed attribute (such as the 50 Ω connector). This data is not warranted and is measured at room temperature (approximately 25℃).

Measured: an attribute measured during the design phase which can be compared to the expected performance, such as the amplitude drift variation with time. This data is not warranted and is measured at room temperature (approximately 25℃).

NOTE: All charts in this manual are the measurement results of multiple instruments at room temperature unless otherwise noted. The specifications (except the tracking generator specifications) listed in this manual are those when the tracking generator is off.
