## Overview

Pendulum Instruments High Voltage Linear Amplifiers are general purpose broadband linear amplifiers having a fixed or variable amplification and capable of bipolar or unipolar output. The amplifiers outputs are linear from DC up to Megahertz range, and exist in Single-Channel and Dual-Channel versions.

Pendulum Instruments High Voltage Linear Amplifiers are valuable tools, for research institutes, R&D labs and component manufacturing industries, in a wide range of applications. Common examples are driving piezo actuators, MEMS, OLEDs, liquid crystals, etc.

The amplifiers are designed to drive resistive and/or small capacitive loads. The output is equipped with a current limiting circuit that withstands accidental short-circuits.

## Single-channel Amplifier selection

We offer a wide range of Single-Channel Hi-Voltage Linear Amplifiers to suit any performance demand for Output voltage, Output current, Speed/Bandwidth and/or budget.

Select your Amplifier from one of our 4 series:

**F-series (F10A, F20A) – Low Cost series**

**A-series (A400, A600, A800) – High Voltage series**

**P-series (P100, P150, P200) – High Power series**

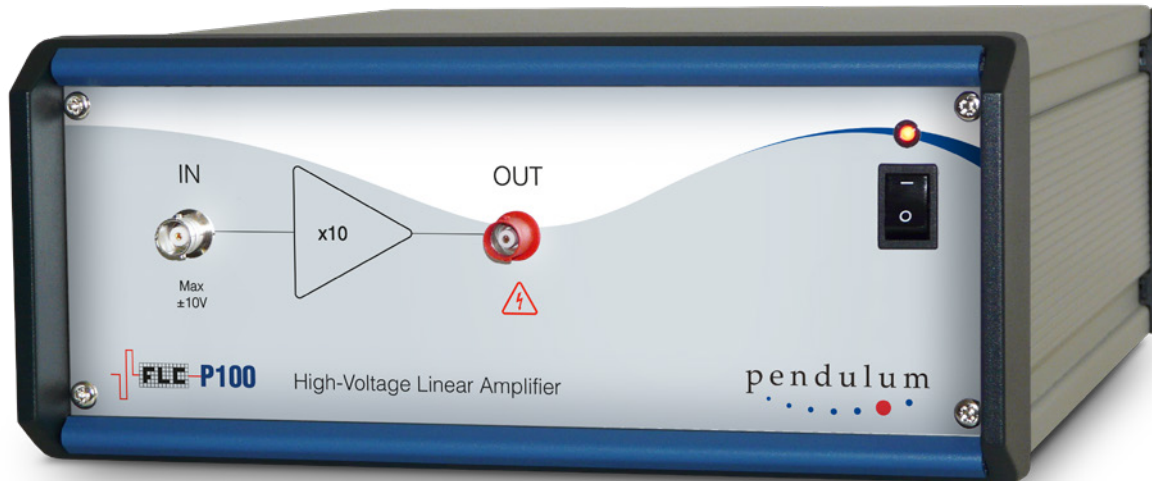

**PV-series (F30PV, F70PV) – High Speed series**

Explore details of the individual models on the follow pages.

For Dual-Channel Amplifiers, we refer to our [Dual Channel High Voltage Linear Amplifiers](#) Datasheet.

# High Voltage High Current Linear Amplifier P100

The Pendulum Instruments High Voltage High Current Linear Amplifier P100 has a fixed amplification of 10 times and capable of bipolar high voltage output of  $\pm 50\text{V}$ . Any signal source with amplitude up to  $\pm 10\text{V}$  can be used as an input device. The input amplitude should normally be kept within  $\pm 10\text{V}$ .

The maximum capacitive load is set at the factory to  $30\text{V}/\mu\text{s}$  which yields the load limit of  $200\text{ nF}$ . The continuous output current limit is  $2\text{ A}$  and the output power limit is ca  $128\text{ W}$ .

## Frequency response

Full and small-signal frequency responses without load (blue and green marks) and with  $100\text{ nF}$  capacitive load (red marks), respectively, are shown in the diagram below:
